30. How demanding was the program?⁵

31. Have the ECTS been harmonized with the real workload in the courses?⁵

32. What do you see as the best feature of the study program you completed? The best features of this program is that this program has a great advantages in the future for us. Because we are expecting to have good opportunities in the future because this program is rare for our country and needs to be more improved like to have development in real estate. The things that we learned in this program will help us in the future.

33. What do you see as a drawback in the study program you completed? The only drawback I think will be that the program that we studied is not very well known and there are not the right laws for management of real estate in our country.

34. What would you improve in the overall quality of the program? One thing that I will improve is that I would suggest that students need to have books to know where to focus and learn for exams and not use the slide lectures. And I will suggest to have more exams with projects because we learned a lot from research.

31. Have the ECTS been harmonized with the real workload in the courses?5

32. What do you see as the best feature of the study program you completed?The content and the structure of the study program, not only covers the bases of the information, but it touches on the real-social aspects of the sector itself. The best features were how the technical applicable tools may be used in the real contexts of the country, its economics and social and cultural acceptances and how tools may be adapted in different environments of governance.

33. What do you see as a drawback in the study program you completed?Actually, haven't notices any drawbacks, in opposite, I felt the structure of the study program is an "eye opener" for even bigger opportunities. How the technical tools of property evaluations might be restructured in a better way of governance that might contribute toward more efficient and inclusive ways of transparent sector governance. The main gain of this study program was to study the main technical ways and tools of the sector itself, which in a longer term of development might be in-cooperated within other governance systems and processes.

34. What would you improve in the overall quality of the program? I think, the model of "future predictions" or themes/questions that start with "IF's" were a great tool. My opinion, on the questions with IF's triggered a huge demand and thinking of the future scenarios that might come up in a years of development. And, IF's, also make a link among the - real estate and sector demand and variations, but also the reflections on the society itself, in conjunction with the potential future economical developments of the country itself.

30. How demanding was the program?5

31. Have the ECTS been harmonized with the real workload in the courses?5

32. What do you see as the best feature of the study program you completed?The approach towards the students was excellent. I have truly enjoyed being one of the students and have learned a lot. I particularly liked the element of relating the subject matter to real life problems in the industry, from Professor Vlsar Hoxha as well as Professor Hazer Dana. Sharing the work experience in property evaluation and land administration in Kosovo during our lessons, was more than welcome to hear and learn from. This gave us a better understanding of challenges that are to be faced once we enter the market as a workforce. Their tutors were also outstanding in helping the students.

33. What do you see as a drawback in the study program you completed?N/A

34. What would you improve in the overall quality of the program?Perhaps i would prepare a welcome package for the new students, were they would receive information related to recognition of diploma's hence degree's that are to be obtained from your institution, if they are recognized in the EU. Also a clear information on payment methods, per month or in total etc could be something included in the information package. Requirement of TOEFL

certification etc. and links to twin institutions (Slovenia) in case students would like to further their studies in the Management of Infrastructure and Real Estate or Energy Efficiency etc.

31. Have the ECTS been harmonized with the real workload in the courses?⁵

32. What do you see as the best feature of the study program you completed? I think that the best feature of the study program is that I learnt something different from what I used to learn in other programs. So, the most important thing is that it is a unique program that wasn't before in Kosovo, which opens new opportunities for youngsters to get employed more easily.

33. What do you see as a drawback in the study program you completed? I do not see anything as a big drawback, the only thing is that us as students need to learn and exercise more about how to manage real estate.

34. What would you improve in the overall quality of the program?¹ 1. When we have work on study papers in groups I prefer no more than 3 students. 2. To visit buildings that are constructed with sustainable materials, (I mean sustainable buildings) because students can see and better understand the importance of program as well. 3. Additional class for real estate valuation subject.
